Novel cytochrome P450 enzyme and nucleotides encoding the enzyme, uses for preparing amphotericin derivative or analog antibiotic agent with altered properties, in biosynthesis of polyketide other than amphotericin.

Claim 1; Page 52-114; 276pp; English

for producing amphotericin derivatives glycosylated with alternative sugars; amphDII or amphDII gene sequences are useful in engineered biosynthesis of perosaminyl-amphoteronolide B; amphDII or amphDII and amphN gene sequences are useful in the engineered biosynthesis of perosaminyl-16-descarboxyl-16-methyl amphoteronolide B; amphDIII, amphDII and amphDI gene sequences are useful for preparing polypeptides capable of addition of mycosamine to a polyketide other than amphoteronolide A or B or for preparing polypeptides for in vitro synthesis of GDP-mycosamine. The present sequence is S. nodosus amph biosynthetic gene cluster responsible for the biosynthesis of the polyene antibiotic amphotericin (amph) of Streptomyces nodosus. Polymucleotides of the invention are useful for preparing amphotericin derivatives or analogue antibiotic agents with altered properties and in the biosynthesis of polyketides other than amphotericin, amphDIII, amphDII or amphDI mutants are useful The invention relates to the gene cluster encoding the polypeptides
